

### Sarnico 50 - Art and technology

A new boat is coming to life, expression of style, a melting of art and technology. It is the Sarnico 50. Carlo Nuvolari Duolo and Dan Lenard have designed it thinking to a “coupé”, capable to welcome and protect its guests, but dreaming a “spider”, which can completely open towards the sea and the sky. It has been computer designed and an electronically controlled machine have prepared perfect moulds. Soft lines, really painstaking furniture, finishing, are authentic and pure expression of craftsman work, which comes from the inheritance of Sarnico carpenters. The construction phases and the mock-up of the interiors are to be seen in the new shipyard.

The look is characterized by the windows design, apparently interrupted, capable to minimize the roll-bar shape, giving the impression that the hard-top is floating in the air. The sliding roof has unusual sizes and uncover the cockpit completely up to the front glass. The mechanism allowing the opening has been developed by using a technology loaned from industry car. The sportsman windshield obviously reveals a strong character, which is confirmed by performances. The outside spaces have been rationalised in favour of inhabitable concepts, by reducing the front deck in favour of a longer cockpit, thus maintaining very comfortable sundeck areas either in the front and in the aft.

Under deck art and technology meets and can offer comfortable and elegant surroundings. The cad/cam design of interior lay-out has been developed through the construction of a wooden mock-up where architects and carpenters have really studied, ergonomic and inhabitable concepts. In such a way has been possible to get the maximum from each and every corner, to get even three cabins with bathrooms. Another solution offers two big rooms, one at bow for the owner the other one aftwards for the guests. The furniture and accessories location has been carefully planned to offer the maximum of the comfort. The sober luxury and the meticulous accuracy of each and every details complete this new master piece of art and technology.

Waiting for the first unit launching, Sarnico 43, 45 and 58 are on exhibition in Verona.
